Computer Visions Course Outline

Get What You Want

We offer highly customizable group training courses: desktop applications, web development, networking & operating systems, technical certification, professional development & skills, help desk.

Get It When & Where You Want It

All Computer Visions courses are available for presentation on-site or off-site for your convenience. We can roll out any combination of courses at one or more locations anywhere in the United States, according to your requirements and time table. Just let us know and we'll work with you!

Corporate Training Solutions

Corporations look to us to train their employees. Why? Because our proven training methods have increased employee proficiency and productivity. We assign one person to each of our corporate clients to ensure quality service, and we also offer extranet Web registration, management, reporting and billing for all clients. Simplicity, quality and outstanding service are our hallmarks.

Consulting Solutions

Consulting is about trust, service and accountability. Our consulting division is one of the fastest-growing around. Why?

6232A: Implementing a Microsoft SQL Server 2008 Database

This course provides students with the knowledge and skills to implement a Microsoft SQL Server 2008 database. The course focuses on teaching individuals how to use SQL Server 2008 product features and tools related to implementing a database.

Outline:

Module 1: Creating Databases and Database Files

The students will learn one of the most fundamental tasks that a database developer must perform, the creation of a database and its major components, such as creating databases, setting database options, creating filegroups, schemas, and database snapshots.

Lessons

- Creating Databases
- Creating Filegroups
- Creating Schemas
- Creating Database Snapshots

Lab : Creating Databases and Database Files

- (Level 200) Creating a Database
- (Level 200) Creating Schemas
- (Level 300) Creating a Database Snapshot

Module 2: Creating Data Types and Tables

The students will learn about the system-supplied data types in SQL Server 2008. They will learn how to define custom Transact-SQL data types and how to create tables and how to use partitioned tables to organize data into multiple partitions.

Lessons

- Creating Data Types
- Creating Tables
- Creating Partitioned Tables

Lab : Creating Data Types and Tables

- (Level 200): Creating Data Types
- (Level 200): Using New Date and Time Data Types
- (Level 200): Creating Tables
- (Level 300) Creating Partitioned Tables

Clients trust us to provide excellent service and expertise. Visit our [consulting section](#) for more information.

Classroom and Computer Rentals

Need space and equipment to conduct specialized presentations or classes? We can help. With our world class classrooms and state of the art projection and presentation equipment, we take care of the details so you can have a successful presentation.

Module 3: Creating and Tuning Indexes

The students will learn how to plan, create, and optimize indexes to attain optimal performance benefits.

Lessons

- Planning Indexes
- Creating Indexes
- Optimizing Indexes

Lab : Creating and Tuning Indexes

- (Level 200) Creating Indexes
- (Level 300) Tuning Indexes

Module 4: Implementing Data Integrity by Using Constraints and Triggers

The students will learn about implementing data integrity in SQL Server 2008 by using constraints. They will also implement data integrity by using triggers.

Lessons

- Data Integrity Overview
- Implementing Constraints
- Implementing Triggers

Lab : Implementing Data Integrity by Using Constraints and Triggers

- (Level 200) Creating Constraints
- (Level 200) Disabling Constraints
- (Level 300) Creating Triggers

Module 5: Using XML

The students will learn how to work with XML, including use of the FOR XML clause, the OPENXML function, XQuery expressions, and the xml native data type. They will learn the considerations to be taken into account when creating XML indexes and the syntax used to create the XML indexes. They will also learn what XML schemas and XML schema collections are as well as how to use them to implement typed XML data.

Lessons

- Using the XML Data Type
- Retrieving XML by Using FOR XML
- Shredding XML by Using OPENXML
- Introducing XQuery
- Creating XML Indexes
- Implementing XML Schemas

Lab : Using XML

- (Level 200) Mapping Relational Data and XML
- (Level 200) Storing XML Natively in the Database
- (Level 300) Using XQuery with XML Methods
- (Level 200) Create XML Indexes
- (Level 300) Implementing XML Schemas

Module 6: Implementing Views

The students will be introduced to the different types of views available in Microsoft SQL Server 2008 which provide a convenient way to access data through a predefined query.

Lessons

- Introduction to Views

- Creating and Managing Views
- Optimizing Performance by Using Views

Lab : Implementing Views

- (Level 200) Creating Views
- (Level 200) Creating Indexed Views
- (Level 200) Creating Partitioned Views

Module 7: Implementing Stored Procedures

The students will learn the design and implementation of stored procedures to enforce business rules or data consistency, or to modify and maintain existing stored procedures written by other developers.

Lessons

- Implementing Stored Procedures
- Creating Parameterized Stored Procedures
- Working With Execution Plans
- Handling Errors

Lab : Implementing Stored Procedures

- (Level 300) Creating Stored Procedures
- (Level 300) Working with Execution Plans

Module 8: Implementing Functions

The students will learn the design and implementation of user-defined functions that enforce business rules or data consistency, or to modify and maintain existing functions written by other developers.

Lessons

- Creating and Using Functions
- Working with Functions
- Controlling Execution Context

Lab : Implementing Functions

- (Level 300) Creating Functions
- (Level 300) Controlling Execution Context

Module 9: Implementing Managed Code in the Database

The students will learn to use managed code to implement database objects, such as stored procedures, user-defined data types, user-defined functions, and triggers.

Lessons

- Introduction to the SQL Server Common Language Runtime
- Importing and Configuring Assemblies
- Creating Managed Database Objects

Lab : Implementing Managed Code in the Database

- (Level 300) Importing an Assembly
- (Level 300) Creating Managed Database Objects

Module 10: Managing Transactions and Locks

The students will learn to use transactions and SQL Server locking mechanisms to meet the performance and data integrity requirements of their applications.

Lessons

- Overview of Transactions and Locks
- Managing Transactions
- Understanding SQL Server Locking Architecture

	<ul style="list-style-type: none">• Managing Locks <p>Lab : Managing Transactions and Locks</p> <ul style="list-style-type: none">• (Level 300) Using Transactions• (Level 300) Managing Locks• (Level 300) Using Partition Locking <p>Module 11: Using Service Broker</p> <p>The students will learn to use Service Broker to create secure, reliable, and scalable applications.</p> <p>Lessons</p> <ul style="list-style-type: none">• Service Broker Overview• Creating Service Broker Objects• Sending and Receiving Messages <p>Lab : Using Service Broker</p> <ul style="list-style-type: none">• (Level 300) Creating Service Broker Objects• (Level 300) Implementing the Initiating Service• (Level 300) Implementing the Target Service
